Puangpaka (Mook) Rattana

Product Engineer | Design-led frontend and iOS

London | +44 7917 923143 | mpmookr@gmail.com | mooksportfolio.netlify.app | github.com/MpmookR

Eligible to work in the UK - No employer sponsorship required

PROFILE

Product engineer who designs what she builds. I take products from user research to shipped code: React, Next.js and TypeScript on the web, SwiftUI and Firebase on iOS, with Figma and design systems in between. I work with AI coding tools such as Claude Code and Codex inside a structured workflow, so prototypes become tested, working features. MSc Software Engineering, Google UX Design Certificate, and two years in customer operations for Meta eCommerce, where I saw first-hand how small interface problems turn into thousands of support contacts.

SELECTED PROJECTS

SoPup | Two-sided matching app for dog owners | MSc final project (Distinction), 2025
SwiftUI · Firebase · TypeScript · Cloud Run

- Built the iOS app in SwiftUI on Firebase, with a serverless TypeScript matching service on Google Cloud Run.
- Turned research with dog owners, trainers and vets into behaviour-aware matching rules and safer meetup flows, enforced by the system rather than left to users.
- Released to 20+ TestFlight users and used real-device feedback to prioritise fixes to onboarding, matching and meetups. Designed end to end in Figma with a reusable component library and accessible, inclusive patterns.

LocalEdition | Bilingual menu and CMS for a local bar | Freelance, 2026
Next.js · TypeScript · Sanity CMS

- Built and shipped a bilingual Thai and English QR menu in Next.js and TypeScript, now live at the venue.
- Modelled the content in Sanity CMS so a non-technical owner updates menus, prices and hours herself, with no code changes or redeploys.
- Scoped it from interviews with the owner: mapped two journeys (guests browsing on their phones, the owner editing on a busy shift), tested mobile-first flows in Figma with her, then built to WCAG AA.

Ondo | First-box builder for a coffee and tea subscription | Personal project, 2026
Next.js · Tailwind · Storybook · Vercel

- Built a tokens-first design system in Next.js, Tailwind and Storybook, and published it live on Vercel alongside the product.
- Wrote a DESIGN.md guide and a Claude skill so AI coding tools generate on-system UI instead of one-off styles.
- Designed and prototyped a mobile-first flow for building a first subscription box, aimed at raising order value and items per order without hurting conversion. Started as a two-day design challenge, then extended with a homepage.

EXPERIENCE

Contract UX Designer | MoodBoard (iOS widget app) | Jul 2023 – Apr 2024

- Worked side by side with the iOS developer, checking every proposal for build feasibility against iOS constraints and Apple's Human Interface Guidelines before handoff.
- Redesigned high-frequency photo-editing workflows to reduce cognitive load, delivering flows, wireframes and build-ready Figma specs.
- Surveyed and analysed feedback from 28 users and turned it into prioritised recommendations for stakeholders.

Product Operations & Customer Experience Lead | Teleperformance (Meta eCommerce) | 2019 – 2021

- Analysed 10,000+ customer interactions to trace recurring interface problems, confusing journeys and third-party failures, and turned them into structured insights for product and operations teams.
- Became the project's first Subject Matter Expert and led calibration sessions across EMEA, APAC and North America on emerging product issues.

SKILLS

Engineering: TypeScript, JavaScript, React, Next.js, SwiftUI, Node.js, Firebase, Sanity CMS, Tailwind, Storybook, Git and GitHub, Vercel, Google Cloud Run

AI-assisted development: Claude Code, Codex, Figma MCP, OpenAI API, prompt design and evaluation

Design: Figma, prototyping, design systems and tokens, interaction design, information architecture, accessibility (WCAG), Apple HIG

Research: user interviews, surveys, usability testing, qualitative synthesis, journey mapping

Collaboration: working with PMs and engineers, design-to-code handoff, design critique, Agile delivery

EDUCATION

MSc Software Engineering | University of Westminster | 2024 – 2025

Google UX Design Certificate | Coursera | 2022 – 2023

BSc Marketing | Prince of Songkla University | 2013 – 2017
