Puangpaka (Mook) Rattana

Product Engineer
London | +447917 923143 | mpmookr@gmail.com | github.com/MpmookR | mooksportfolio.netlify.app
Eligible to work in the UK - No employer sponsorship required

Professional Summary
Product-minded software engineer who builds and ships user-centred web and mobile products using TypeScript, React, Next.js, Node.js, SwiftUI and Firebase. Experienced in taking loosely defined problems from user research and rapid prototyping through implementation, testing and release. Uses AI tools throughout design and development to explore solutions, generate and review code, test product behaviour and improve accessibility, while validating outputs and remaining responsible for technical and product decisions.

Product Engineer | Patient Communication Assistant: ZOE Hackathon 2026
Next.js, React, TypeScript, Tailwind CSS, OpenAI API

- Built and shipped a functional AI-assisted healthcare MVP with a six-person cross-functional team in two days.
- Translated patient communication problems into a guided question flow that turned unstructured symptom descriptions into clinician-ready summaries.
- Integrated the OpenAI Responses API with structured outputs, prompt rules and safety boundaries to produce consistent, non-diagnostic responses.
- Tested prompt behaviour using 50 mock patient stories, reviewing response structure, missing information and potentially unsafe outputs.
- Worked with engineering, design and healthcare teammates to prioritise the highest-value workflow and cut lower-priority features to meet the deadline.

Product Engineer | SoPup: iOS Socialisation App – MSc Final Project | 2025
SwiftUI, Node.js, TypeScript, REST APIs, Firebase, Firestore, Cloud Functions, FCM

- Owned the product from dog-owner research and Figma prototyping through full-stack development, TestFlight release and user feedback.
- Designed Firestore data models and entity relationships supporting users, dog profiles, matching, requests, conversations, meetups and reviews.
- Built Node.js and TypeScript Cloud Functions connecting database operations, matching logic, notifications and SwiftUI frontend responses.
- Implemented Firebase Authentication, location-based matching, chat creation, duplicate-request prevention and FCM push notifications.
- Released the app through TestFlight to 20+ testers and used feedback to improve onboarding, matching and meetup flows.

Product Engineer | LocalEdition Business Website and CMS | 2026
Next.js, React, TypeScript, Tailwind CSS, Sanity CMS

- Interviewed the business owner to identify customer and content-management problems, then translated them into a scoped product solution.
- Designed and built a responsive Next.js website with reusable components and a self-service Sanity CMS.
- Modelled bilingual menu data and entity relationships in TypeScript, including references, validation rules, availability states, image metadata and custom ordering.

Skills
Frontend: React, Next.js, SwiftUI, Tailwind CSS, responsive design, reusable components
Backend & Data: Node.js, REST APIs, Firebase Cloud Functions, Firestore, data modelling, entity relationships, NoSQL, Sanity CMS
Tools & Delivery: Postman, Docker, Git, GitHub Actions, CI/CD fundamentals
Architecture: SOLID, MVVM, service and repository patterns, separation of concerns, serverless architecture
Product & UX: User research, stakeholder interviews, Figma, prototyping, usability testing, accessibility, WCAG
AI: OpenAI API, structured outputs, prompt design, responsible AI workflows, Claude Code, Codex, Figma MCP

Education
MSc Software Engineering | University of Westminster | 2024–2025
Google UX Design Certificate | Coursera | 2022–2023
BSc Marketing | Prince of Songkla University | 2013–2017
